

# Concrete Log Parking Block

**6" Diameter & 6' Long  
193lbs each**

Our concrete log parking blocks are highly unique parking stop blocks that are ideal for both commercial and residential applications.

Each log parking block is hand-cast to the highest quality standards using durable, reinforced 3,500 psi concrete- strong enough to withstand repeated impact from moving vehicles.

The color and texture of each log is carefully replicated to give the appearance of authentic natural wooden logs.

The only difference between the two is that our concrete stop will never rot & last forever!

In addition to parking blocks- use them as tent pad borders, walking path borders, driveway edging & more!

**NITTERHOUSE**
